STONEWARE, INC. Releases Cloud Agent for Windows

Indianapolis, IN – April 3, 2009 – Stoneware, Inc. announced today the release and immediate availability of their Windows Cloud Agent. The Cloud Agent provides Windows desktop integration with the services and applications available through the private cloud created by webNetwork 5.4.

Stoneware's Cloud Agent for Windows was designed to simplify an organization's move toward private cloud computing by integrating all cloud applications and services into the system tray of the end user's desktop. The Stoneware Cloud Agent becomes the migration point for many organizations that are moving from a desktop-centric to cloud-centric computing model. "We are seeing a significant number of organizations that plan to move to a web-based computing model over the next three years," states Ken Quinton, VP of Strategic Sales for Stoneware, Inc. "That being said, organizations are looking for a conversion strategy that allows them to exist in both a desktop and private cloud computing environment during the transition."

For organizations that foresee a mixed Windows-Web environment, the Cloud Agent becomes the critical integration point that fuses the two worlds together. Stoneware's Cloud Agent is uniquely designed to bridge the two worlds of Web and Windows.

Stoneware plans the release of their Universal Cloud Agent in May of 2009. The Universal Cloud Agent will support Windows, Mac, and Linux desktop operating systems.

About Stoneware

Headquartered in Indianapolis, Stoneware is a privately held corporation providing innovative software that enables organizations to build their own "private" cloud for simplified access to all of their applications and services. The company services various sectors including education, manufacturing, healthcare, legal, and financial industries.
