STONEWARE, INC. Releases Cloud Agent for the iPhone and iPod touch

Indianapolis, IN – April 3, 2009 – Stoneware, Inc. announced today the release and immediate availability of their Cloud Agent for the Apple iPhone and iPod touch. The Cloud Agent provides iPhone and iPod touch integration with the services and applications available through the private cloud created by webNetwork 5.4.

Stoneware's Cloud Agents was designed to simplify an organization's move toward private cloud computing by integrating all cloud applications and services into the native interface of the iPhone and iPod touch. The Stoneware Cloud Agent becomes the migration point for many organizations that are moving from a desktop-centric to cloud-centric computing model. "We are seeing a significant number of organizations that plan to move to a web-based computing model over the next three years," states Ken Quinton, VP of Strategic Sales for Stoneware, Inc. "That being said, organizations are looking for new ways to access private cloud applications and services from any device."

The Cloud Agent for the iPhone and iPod touch becomes a critical integration point in the business world where the workforce has become more mobile and the number of devices capable of delivering secure access over the web is increasing at a significant pace.

Stoneware plans the release of their Universal Cloud Agent in May of 2009. The Universal Cloud Agent will support Windows, Mac, and Linux desktop operating systems.

About Stoneware

Headquartered in Indianapolis, Stoneware is a privately held corporation providing innovative software that enables organizations to build their own "private" cloud for simplified access to all of their applications and services. The company services various sectors including education, manufacturing, healthcare, legal, and financial industries.
