

## STONEWARE, INC. Announces the Release of webNetwork 6.0

Indianapolis, IN – July, 2010 – Stoneware, Inc., a leader in private cloud computing, announced the release and immediate availability of webNetwork version 6.0. webNetwork 6.0 provides customers with the ability to create their own private cloud platform and the virtual web desktop to access it.

webNetwork 6.0 features include:

- New virtual web desktop interface webOS-v6
- Cutting-edge push technology for deploying events, actions, and applications to webOS users without browser plug-ins
- Network “Aware” support makes the webNetwork private cloud cognizant of the underlying network infrastructure and capable of directing the quality of service based on an application or a user’s organizational role
- New mobile file access and mobile printing capabilities. Supports all popular devices including the iPhone, Droid, and Blackberry.
- Integration of Microsoft’s Live ID (Software as a Service) offering into the webNetwork cloud platform
- Implementation of webInflexion’s webRDP client, for providing browser integrated access to remote desktop, Microsoft Terminal Server, and VDI solutions

“We are very excited about the release of webNetwork 6.0 and the initial feedback from our customers is extremely encouraging.” states Todd Gibbs, VP of Sales. “No other product on the market offers such a complete private cloud solution and this release clearly separates webNetwork from the rest of the industry. Cloud computing will have a desktop; it will be webNetwork.”
