FOR IMMEDIATE RELEASE

STONEWARE, INC. Announces webOS version 5.3 - Web Desktop Virtualization™

Indianapolis, IN – June, 2008 – Stoneware, Inc. today announced the release and immediate availability of webOS version 5.3. Leveraging Web 2.0 technology, webOS is the next evolution of desktop virtualization. Stoneware webOS provides secure access to web, Windows, and hosted applications all through a virtual web desktop interface that runs inside any standard web browser.

The latest release of webOS delivers services and features highly important to organizations that are beginning their shift towards “cloud” computing. The integration of critical hosted applications such as Google Apps, Salesforce.com, and iTunes University has been added to the list of advanced features and services that center around the delivery of web and Windows applications in a virtual desktop environment.

“We believe that Stoneware’s webOS is a desktop virtualization solution that meets the needs of many organizations finding themselves in High User, Limited Capital (HULC) environment.” states Rick German, CEO of Stoneware, Inc. “Enterprises that are struggling to scale traditional desktop virtualization solutions in a cost effective manner will find Stoneware webOS as an effective means of delivering virtual desktops to large numbers of remote and mobile users.”

Stoneware webOS is the next evolution in virtual desktop computing. To learn more about Stoneware’s webOS please visit www.stonewarewebos.com or contact us at 888.473.9485.
