FOR IMMEDIATE RELEASE

STONEWARE, INC. Integrates Zoho Online Office Applications into Private Cloud Computing Solution, webNetwork

Indianapolis, IN – June 9, 2009 – Stoneware, Inc. announced today that it has signed a distribution agreement with Zoho Corporation enabling customers to easily integrate Zoho’s online productivity applications (Writer, Sheet, and Show) into any webNetwork private cloud environment. Stoneware’s integration of Zoho’s online productivity applications will provide customers with a web-based version of office applications that can be accessed from the private cloud with just a browser and an Internet connection.

Stoneware’s webNetwork uniquely integrates the Zoho online productivity applications by enabling connectivity between the hosted Zoho applications and the user’s home and shared directories on the local area network. Instead of saving documents, spreadsheets, and presentations to the web, webNetwork will ensure that document and file access remains in the customer’s secured network environment where IT can manage and control access.

"Stoneware provides a perfect marriage between the offline and online worlds - giving users the choice to use the Zoho online office applications together with existing local storage. This fits in with Zoho's strategy to bridge cloud computing and traditional desktop and network access. We are thrilled to be a part of Stoneware's solution, said Ian Wenig, Zoho Senior Director Business Development.

“We see the integration of Zoho’s online productivity applications as a critical step in moving from a desktop-centric to a private cloud computing model” states Todd Gibbs, Vice President of Sales for Stoneware, Inc. “Partnering with Zoho for office productivity tools enables organizations to reduce costs, control security, and allows users to work from anywhere using any device while accessing the cloud.”

To learn more about Stoneware, Inc. or the integration of Zoho online productivity applications go to www.stone-ware.com.

About Stoneware

Headquartered in Indianapolis, Stoneware is a privately held corporation providing innovative software that enables organizations to build their own “private” cloud for simplified access to all of their applications and services. The company services various sectors including education, manufacturing, healthcare, legal, and financial industries.
