STONEWARE, INC. Announces iTunes U Integration with webOS - Web Desktop Virtualization™

Indianapolis, IN – February, 2008 – Stoneware, Inc. today announced the integration of Apple's iTunes U with their virtualized web desktop solution, webOS. iTunes U puts the power of the iTunes Store to work for colleges, universities, and other education organizations. iTunes U users can easily search, download, and play education content just like they do music, movies, and TV shows. With the integration of iTunes U into the user's virtualized webOS desktop, students can access their applications, files, documents, educational podcasts, and content from a single, secure, virtualized web desktop that is accessible from anywhere.

"We see this as a critical integration point for Stoneware webOS." says Ken Quinton, VP Sales, Stoneware, Inc. "Our K12 and higher education customers want to simplify access to both their applications and audio/video podcasts. Integrating iTunes U with Stoneware's Virtual Web Desktop technology guarantees that organizations can provide their students with a single, secure desktop to access all of their critical educational tools."

Stoneware webOS is the next evolution in virtual desktop computing. To learn more about Stoneware webOS please visit www.stonewarewebos.com or contact us at 888.473.9485.
