## STONEWARE, INC. Releases webNetwork 5.4, Private Cloud Ready

Indianapolis, IN – March 9, 2009 – Stoneware, Inc. announced today the release and immediate availability of webNetwork version 5.4. Stoneware’s latest version of webNetwork allows organizations to easily move toward private cloud computing where the focus shifts from a client-centric to a web-centric deployment model. New features such as the integration of Zoho’s web office applications, the Apple iPhone/iPod Touch Cloud Agent, Windows Cloud Agent, Live Edit, and thin application integration simplify an organization’s move toward private cloud computing.

“The pressure of the economy is forcing many organizations to rethink their desktop and application delivery strategy” states Rick German, President of Stoneware, Inc. “Organizations want to lessen their client-side dependencies and create their own private cloud where they can better secure, manage, and provision applications and services. Stoneware’s goal, with the introduction of these new features, is to enable an organization’s move to private cloud computing where web and hosted web services are becoming the predominant number of enterprise applications.”

Stoneware’s webNetwork is the first product on the market enabling organizations to build their own private cloud where web, Windows, and hosted applications can be delivered to end users through their own virtual web desktop.

### *About Stoneware*

Headquartered in Indianapolis, Stoneware is a privately held corporation providing innovative software that enables organizations to build their own “private” cloud for simplified access to all of their applications and services. The company services various sectors including education, manufacturing, healthcare, legal, and financial industries.
