## STONEWARE, INC. Announces webOS - Web Desktop Virtualization™

Indianapolis, IN – February, 2008 – Stoneware, Inc. today announced the release and immediate availability of webOS. webOS is the next evolution of desktop virtualization. Leveraging Web 2.0 technology, Stoneware webOS is a remotely accessible desktop operating environment that runs in a browser and is independent of the underlying operating system. Stoneware webOS can deliver all of an enterprise's applications, data, and services in a virtualized web desktop interface that is available anywhere at anytime.

"We believe that the foundation of virtual desktop computing will match the technologies we are deploying in the enterprise today." states Rick German, CEO of Stoneware, Inc. "Corporations and Software as a Service (SaaS) vendors are predominantly developing and deploying web application solutions because they can be centrally managed, scaled, easily distributed, and secured both inside and outside the organization. A desktop virtualization solution built to deliver these services should be no different. webOS is a virtual desktop solution built on web technologies. It provides organizations with a scalable, manageable, and secure virtual desktop solution that meets today's application environment."

Stoneware webOS is the next evolution in virtual desktop computing. To learn more about Stoneware's webOS please visit [www.stonewarewebos.com](http://www.stonewarewebos.com) or contact us at 888.473.9485.
