

Stoneware™ Inc.

wUnderground Component

Stoneware, Inc.

Configuration Sheet

Date: April 2005

Introduction

This document will provide you with the necessary information to install and configure the wUnderground component in your webNetwork system. Users enter their own zip code and display the weather for that zip code from the Weather Underground site.

Objectives

- wUnderground Component will let the user enter in a zip code to display the weather for that zip code area through a webDesktop component.

Requirements

- webNetwork 4.0 (hotfix 5) or above

Steps

- a) *Extract the contents of the wunderground.zip file into /stoneware/webserv/apps*
 - i) *Note – if Relay Central is enabled remember to unzip the contents into the RelayCentral /webserv/apps directory*
 - ii) *Note – the zip file will create a new wunderground sub directory under apps*

- b) *Create a new webDesktop component*
 - i) *Open webAdmin as a webNetwork administrator*
 - ii) *Browse and expand your Stoneware container*
 - iii) *Select the CREATE A NEW OBJECT option from the left-hand dropdown box.*
 - iv) *Select the **webDesktop Component***
 - v) *Select the NEXT button*
 - vi) *Enter the object name of the component (**wUnderground**)*
 - vii) *Select the NEXT button*
 - viii) *Select the WIZARD button*
 - ix) *Select the LINK TO A WEB PAGE radio button*
 - x) *Select the NEXT button*

- xi) *Enter the Component information*
 - (1) **Title** – *Weather Underground*
 - (2) **Description** – *Displays weather for zip code*
 - (3) **Category** – *Weather*
 - (4) **Size** – *Medium or Large*
 - (5) **Height** – *300*
 - xii) *Select the NEXT button*
 - xiii) *Enter the URL for the publishing component*
 - (1) */apps/wunderground/weather.jsp*
 - xiv) *Select the "Window" & "Scrollbar" options*
 - xv) *Select the NEXT button to continue*
 - xvi) *Select the ADD button to assign users to the new news component*
 - (1) *Select the ADD button*
 - (2) *Browse and select the user, group, or container that should be assigned to the component.*
 - (3) *Select the OK button*
 - (4) *Select the DONE button when you are finished adding users*
 - xvii) *NEW COMPONENT SHOULD BE CREATED*
- c) **Test the new component**
- i) **Login to the webNetwork system as a user that has been granted access to the new component.**
 - ii) **Select the PERSONALIZE button under the ACCOUNT MGMT menu**
 - iii) **Select the ADD CONTENT button in the right column**
 - iv) **Check the box next to the Weather Underground in the Weather Component section.**
 - v) **Press the SAVE SELECTED CONTENT button**
 - vi) **Select the UPDATE PAGE LAYOUT button**
 - vii) **Verify the new component is displayed on the user's personalized webDesktop.**
 - viii) **Enter in a zip code and click Update**
 - ix) **The weather for that zip code should display.**
-
